

## Energy Safety, Monitoring, and Compliance Solutions

EnviroGuard provides complete safety solutions for battery and energy storage environments, delivering reliable battery spill containment systems, advanced hydrogen gas detection devices, durable battery racks, and essential safety equipment. Designed to protect people, property, and critical infrastructure, our products help prevent leaks, control hazardous gases, and ensure compliance with industry and environmental standards.

From initial installation to long-term operation, our proven solutions offer dependable performance, easy integration, and peace of mind for facilities that demand the highest level of safety and reliability. Review our product offerings to determine the solution best suited to your application.

## Spill Control Systems

Protect the environment and your personnel with compliant spill-control solutions. Built from durable, premium materials, these units are ideal for industries that require uninterrupted power – and must meet federal, state, and regulatory containment requirements.

### Eagle

The Eagle is a patented, liner-based spill containment system that complies with all industry standards, as well as local, state, and federal regulations. It features a Class 1 fire-rated, corrosive-resistant, pre-formed, factory-made watertight liner.

### Condor

The Condor System, used in wet-cell battery applications, is a non liner-based spill containment system that complies with NFPA, International Fire Code (IFC), and OSHA. It has metal barrier walls with an acid-resistant, safety yellow coating. Flanges may be in or out to save floor space.

### Condor Plus

The CondorPlus, used in wet-cell battery applications, is a UL Listed, liner based, spill containment system that complies with NFPA, International Fire Code (IFC), Underwriters Laboratories (UL), and OSHA. It has a Class 1 fire rated, corrosive resistant, pre-formed liner and metal barrier walls with acid-resistant, safety yellow coating.

### Hawk

Used in sealed or VRLA battery applications, the Hawk is a UL Listed, patented, liner based, spill containment system that complies with local, state and federal regulations. It has a Class 1 fire rated, acid resistant, pre-formed liner and quick slip, polypropylene barrier walls.

## Spill Control Pans

Fast, hassle-free installation with minimal floor preparation required. Their flexible, modular design can be configured to fit most stationary lead-acid battery applications. Engineered for dependable spill containment.

## Spill Control Trays

Engineered for Cabinet and VRLA battery applications and also for demanding motive power environments. Designed to simplify both installation and ongoing maintenance, this tailored solution adapts to your exact layout. The durable, acid-resistant tray ensures long-lasting protection and dependable performance in critical battery operations.

## FM Approved Absorption Pillows

FM Approved Pillows provide maximum fire protection as required by the largest insurance company in the world. The advanced, pH-reactive visual spill indicator clearly identifies exposure to electrolyte—without false readings—ensuring quick, confident response. Featuring our new and improved dustless Neutrasorb™ technology.

## UL Listed Absorption Pillows

Provides rapid, reliable protection. Designed with high-performance neutralizing material, it quickly absorbs and neutralizes leaking battery acid to reduce equipment damage and prevent hazardous spread, meeting strict safety standards for critical environments.

## KOH Absorption Pillows

The KOH Pillow delivers fast, reliable protection for facilities using nickel-cadmium batteries. Engineered with powerful electrolyte-neutralizing material, it quickly absorbs and neutralizes leaking Potassium Hydroxide (KOH) to help safeguard equipment and minimize hazardous spread.

## Hydrogen Sensors

Ensure safety and peace of mind with advanced Hydrogen Gas Detectors—designed for fast, reliable, and accurate detection of hydrogen leaks in industrial, laboratory, and commercial settings. Compact yet powerful, these detectors feature high-sensitivity sensors and durable construction for long-term dependability.

### HYD-ECO

Engineered for reliability and long-term performance, this detector features a replaceable sensor with a 10-year life cycle and comes factory-calibrated for immediate accuracy.

### HYD-8111

Built for precision and longevity, this detector uses solid-state precious metal technology with a 10–15 year sensor lifecycle for stable, accurate readings over time. Backed by a 5-year full warranty and a 10-year sensor warranty, it's safety you can count on.

### Deluxe Monitors

Engineered for demanding industrial environments, these hydrogen gas detection systems deliver reliable performance. The explosion-proof housing and sensor design ensure dependable operation in hazardous locations, while the hydrogen-specific catalytic sensors provide accurate, targeted detection.

### Auto-Calibrating

This next generation area monitor is a reliable, consistent hydrogen gas detector designed for stationary battery applications. The auto-calibrating HYD-H2-2.0 uses a solid-state non-consumable sensor for direct hydrogen measurement in air or inert gases, with no cross sensitivity.

## Facility Safety Products

We deliver a comprehensive selection of safety equipment and supplies to help protect personnel and facilities in the battery room.

### Battery Terminal Covers

Designed to enhance safety in the battery room, these covers keep personnel at a safe distance from energized components while supporting compliance with NFPA 70E and OSHA 29 CFR requirements.

## Battery Rack

Upgrade your power infrastructure with our versatile battery racks—available in non-seismic, seismic, and front-access designs to suit any installation environment. Built for strength, safety, and long-term reliability, each rack is engineered to support today's demanding energy storage needs while simplifying maintenance and maximizing floor space.

### Front Access Rack

This Rack Series features an engineered front-access battery rack with an optional spill-containment solution designed to meet the requirements of authorities having jurisdiction, offering modular compatibility with all major batteries

### Seismic Racks

EnviroGuard now offers rack series that can meet IEEE 693 Moderate, IEEE 693 High, or NEBS requirements that meet the most stringent building code and seismic standards. All series of racks have been triaxle shake tested and are certified by a California Structural & Professional Engineers.
