

BATTERY ROOM COMPLIANCE

End-to-End Risk Management & Inspection Services

Navigating complex fire codes and environmental regulations for Uninterruptible Power Supply (UPS) battery rooms can be overwhelming. We provide a complete, full-cycle compliance service—from document auditing to physical inspections—ensuring your facility meets local and federal mandates. This paid service helps keep your facility up to date with evolving codes and compliance requirements.

1. Documentation & Records Gathering

We begin by collecting and reviewing your existing Hazardous Material Management Plan (HMMP), staff training logs, preventive maintenance records, and Certificate of Fitness (COF) records to establish your current compliance baseline.

2. Comprehensive On-Site Inspection

Our certified experts conduct a thorough physical site visit to collect real-time data. We evaluate battery conditions, safety signage, PPE availability, spill containment, thermal runaway management, and ventilation systems.

3. Gap Analysis & Code Verification

We cross-reference the gathered documentation and inspection data against current regulatory codes. This allows us to identify critical gaps, missing signage, outdated procedures, or expired certifications.

4. Confidential Reporting & HMMP Updates

You receive a detailed confidential Compliance Assessment Report and a tailored Risk Management Plan (RMP) Addendum. We provide clear, prioritized action items to close all identified gaps and keep your facility fully compliant and audit-ready.

Why Choose Our Compliance Service?

- **Audit Readiness:** Eliminate the stress of surprise inspections with up-to-date logbooks, organized records, and compliant signage.
- **Risk Mitigation:** Ensure proper thermal runaway management, ventilation standards, and emergency procedures are met for VRLA battery systems.
- **Turnkey Solutions:** We don't just point out problems; we provide the exact document addendums and procedural updates needed to fix them
